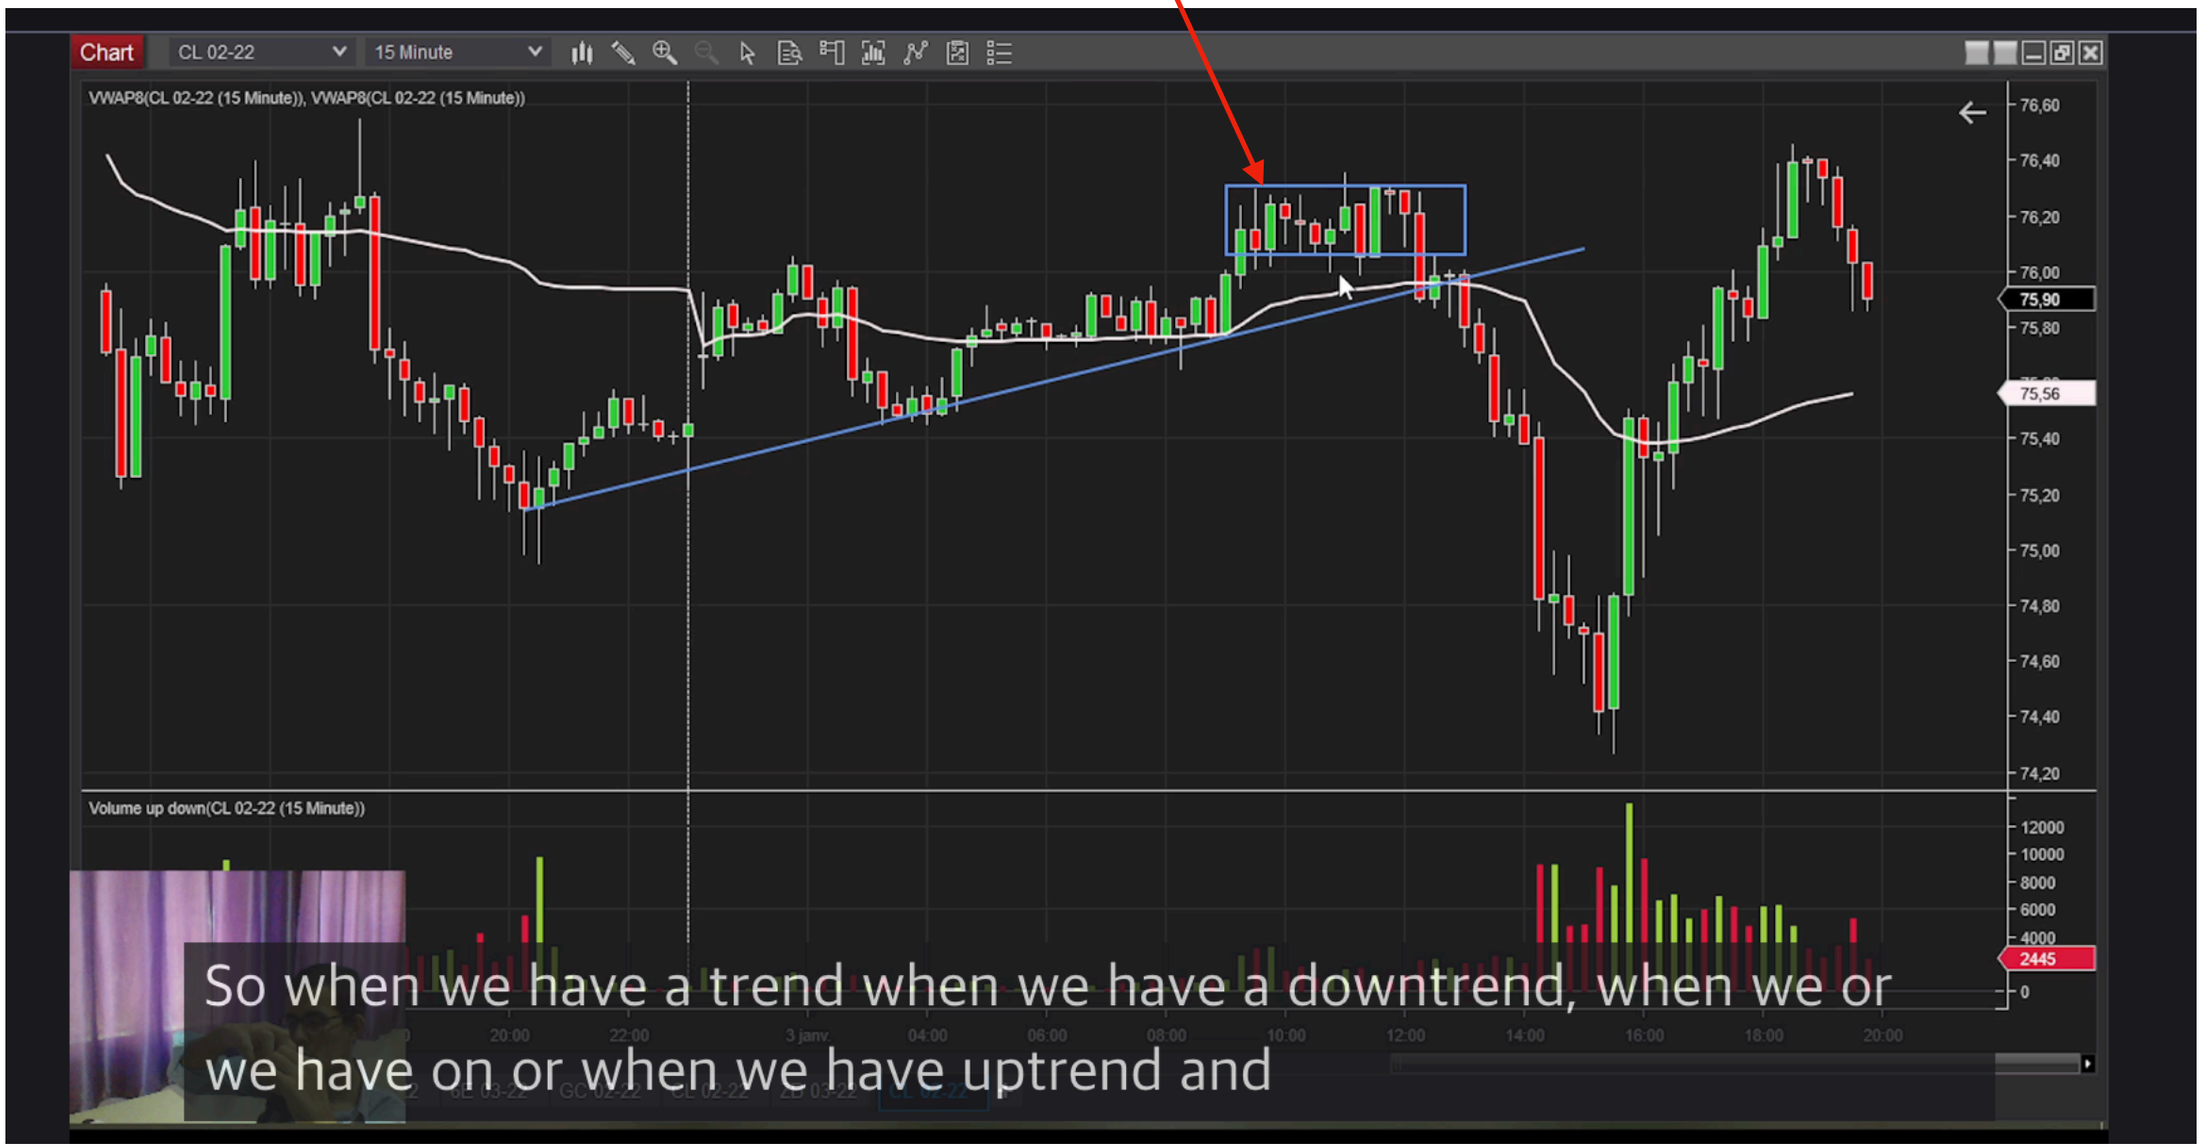
But before I'm going to sell I have to think about stop loss.

Tight한 Trading region이 생길수록 tight한 stop loss를 만들 수 있어서 좋다.



박스권을 돌파할때 거래량이 터지기시작함
Beginning of trend라고 볼 수 있음

Volume spike가 나타났으니 해당부분에서 익절

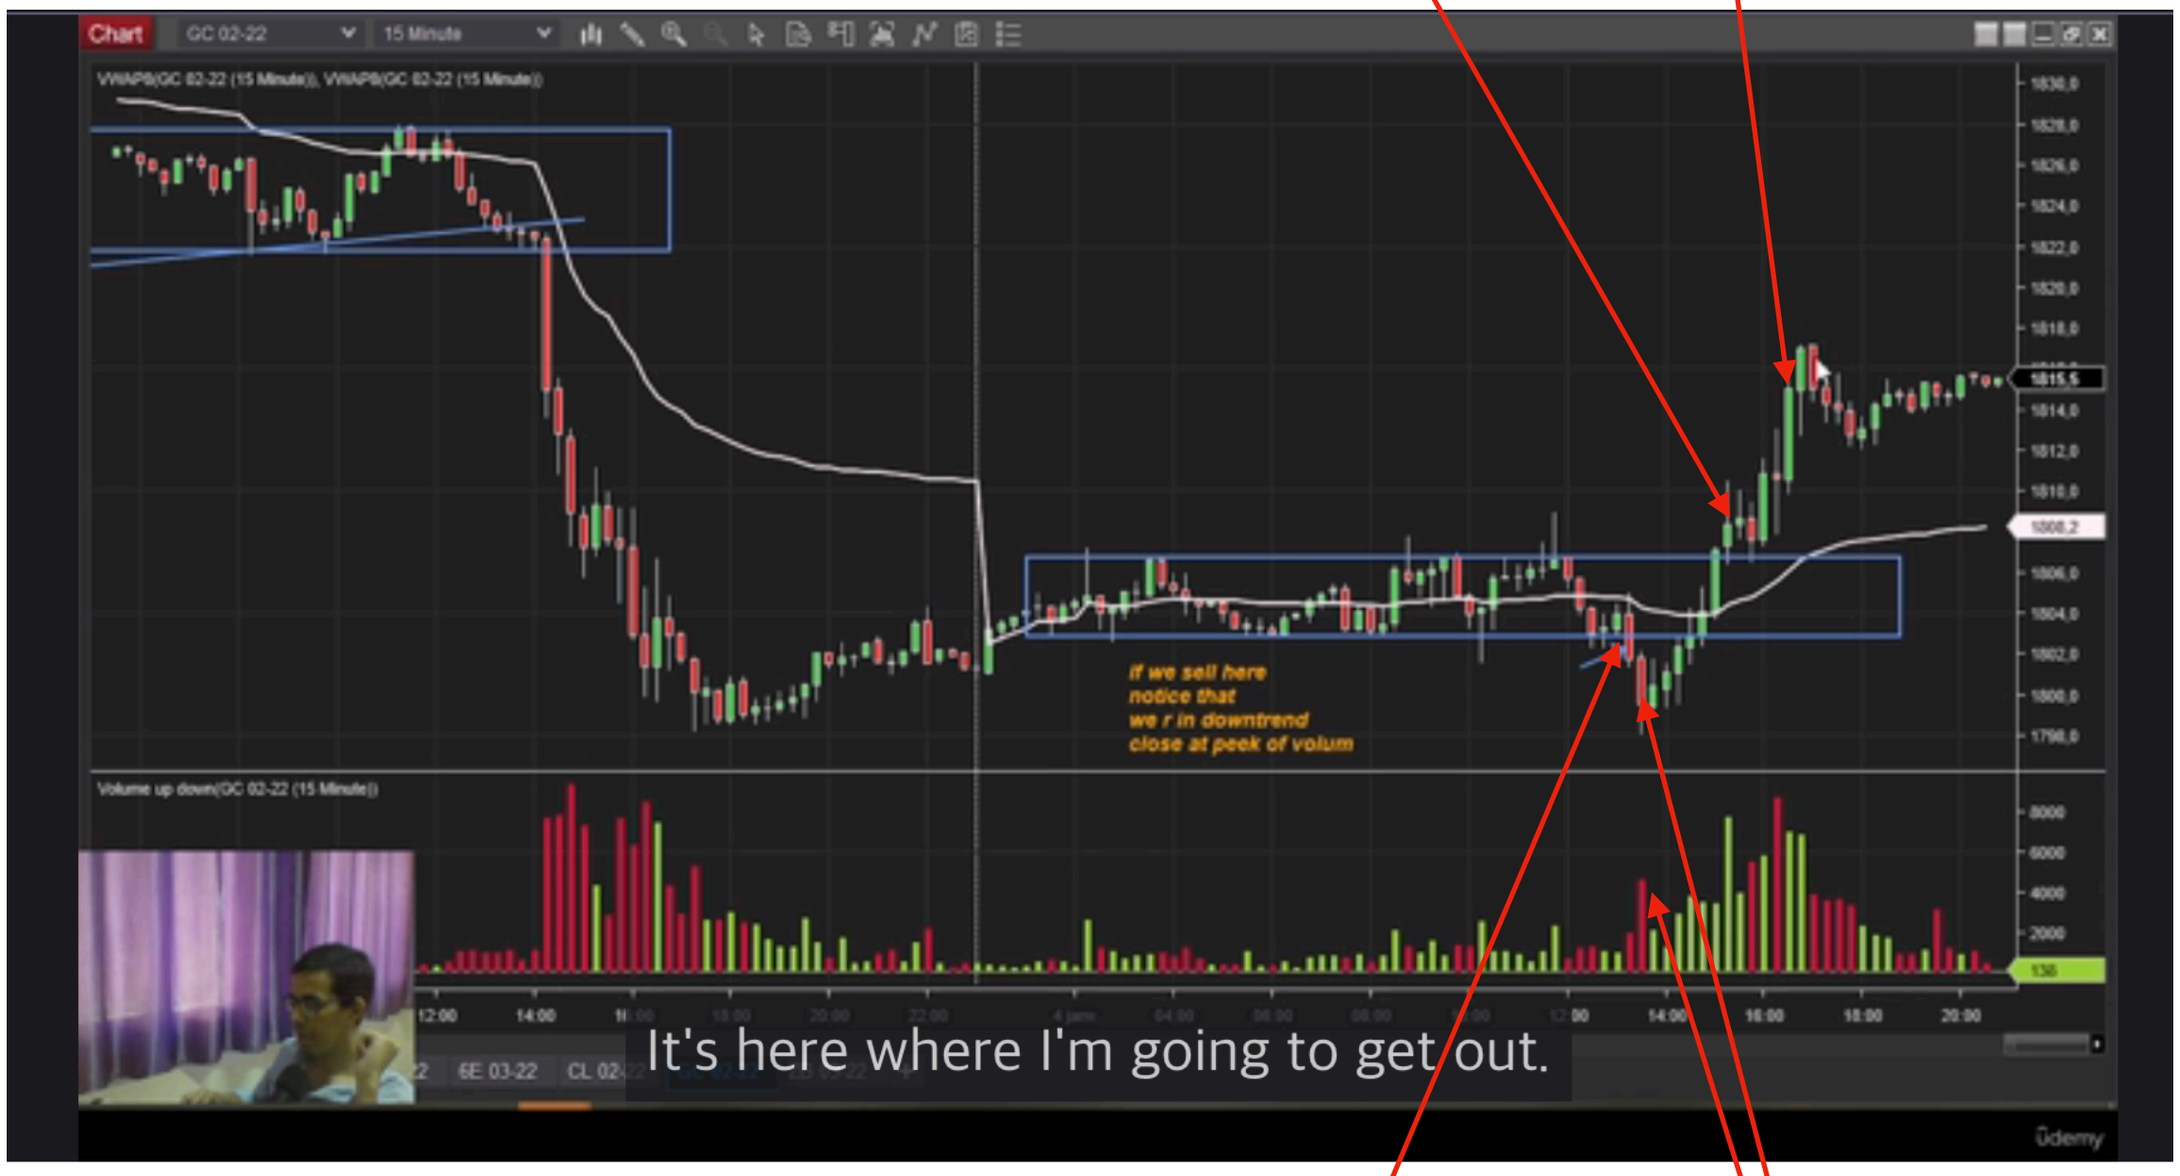
저항선을 뚫었을 때진입

아래 박스선이 stop loss구간

Volume Spike 를 동반하는 vwap돌파로 다시진입가능구간

Volume spike로 익절

상단 박스선 돌파시 구매



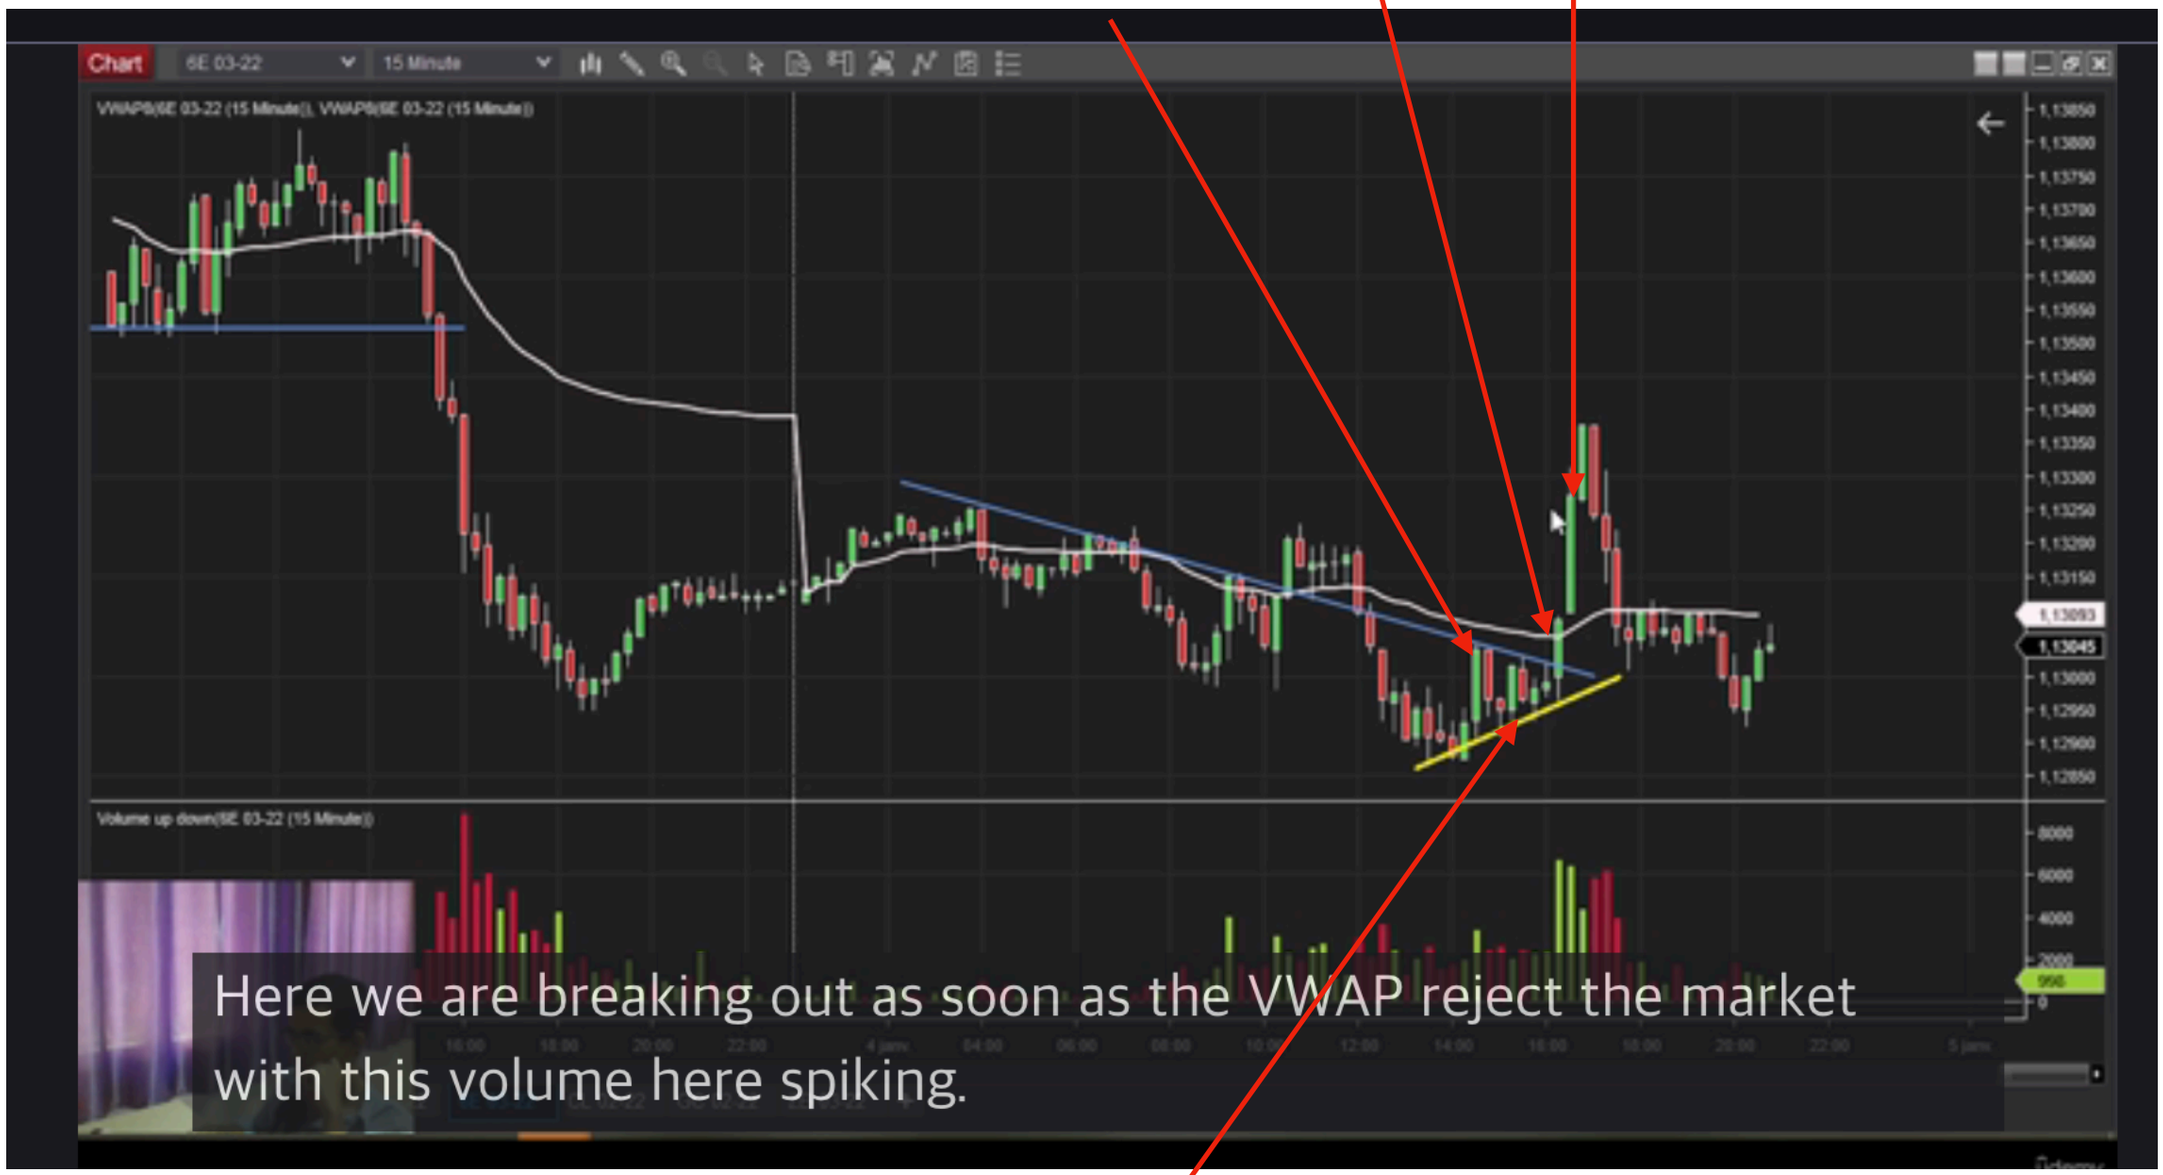
하단 박스선 돌파시 sell

다음 ticker에서 volume spike로 익절

Volume spike로 인한 익절

매수

저항선



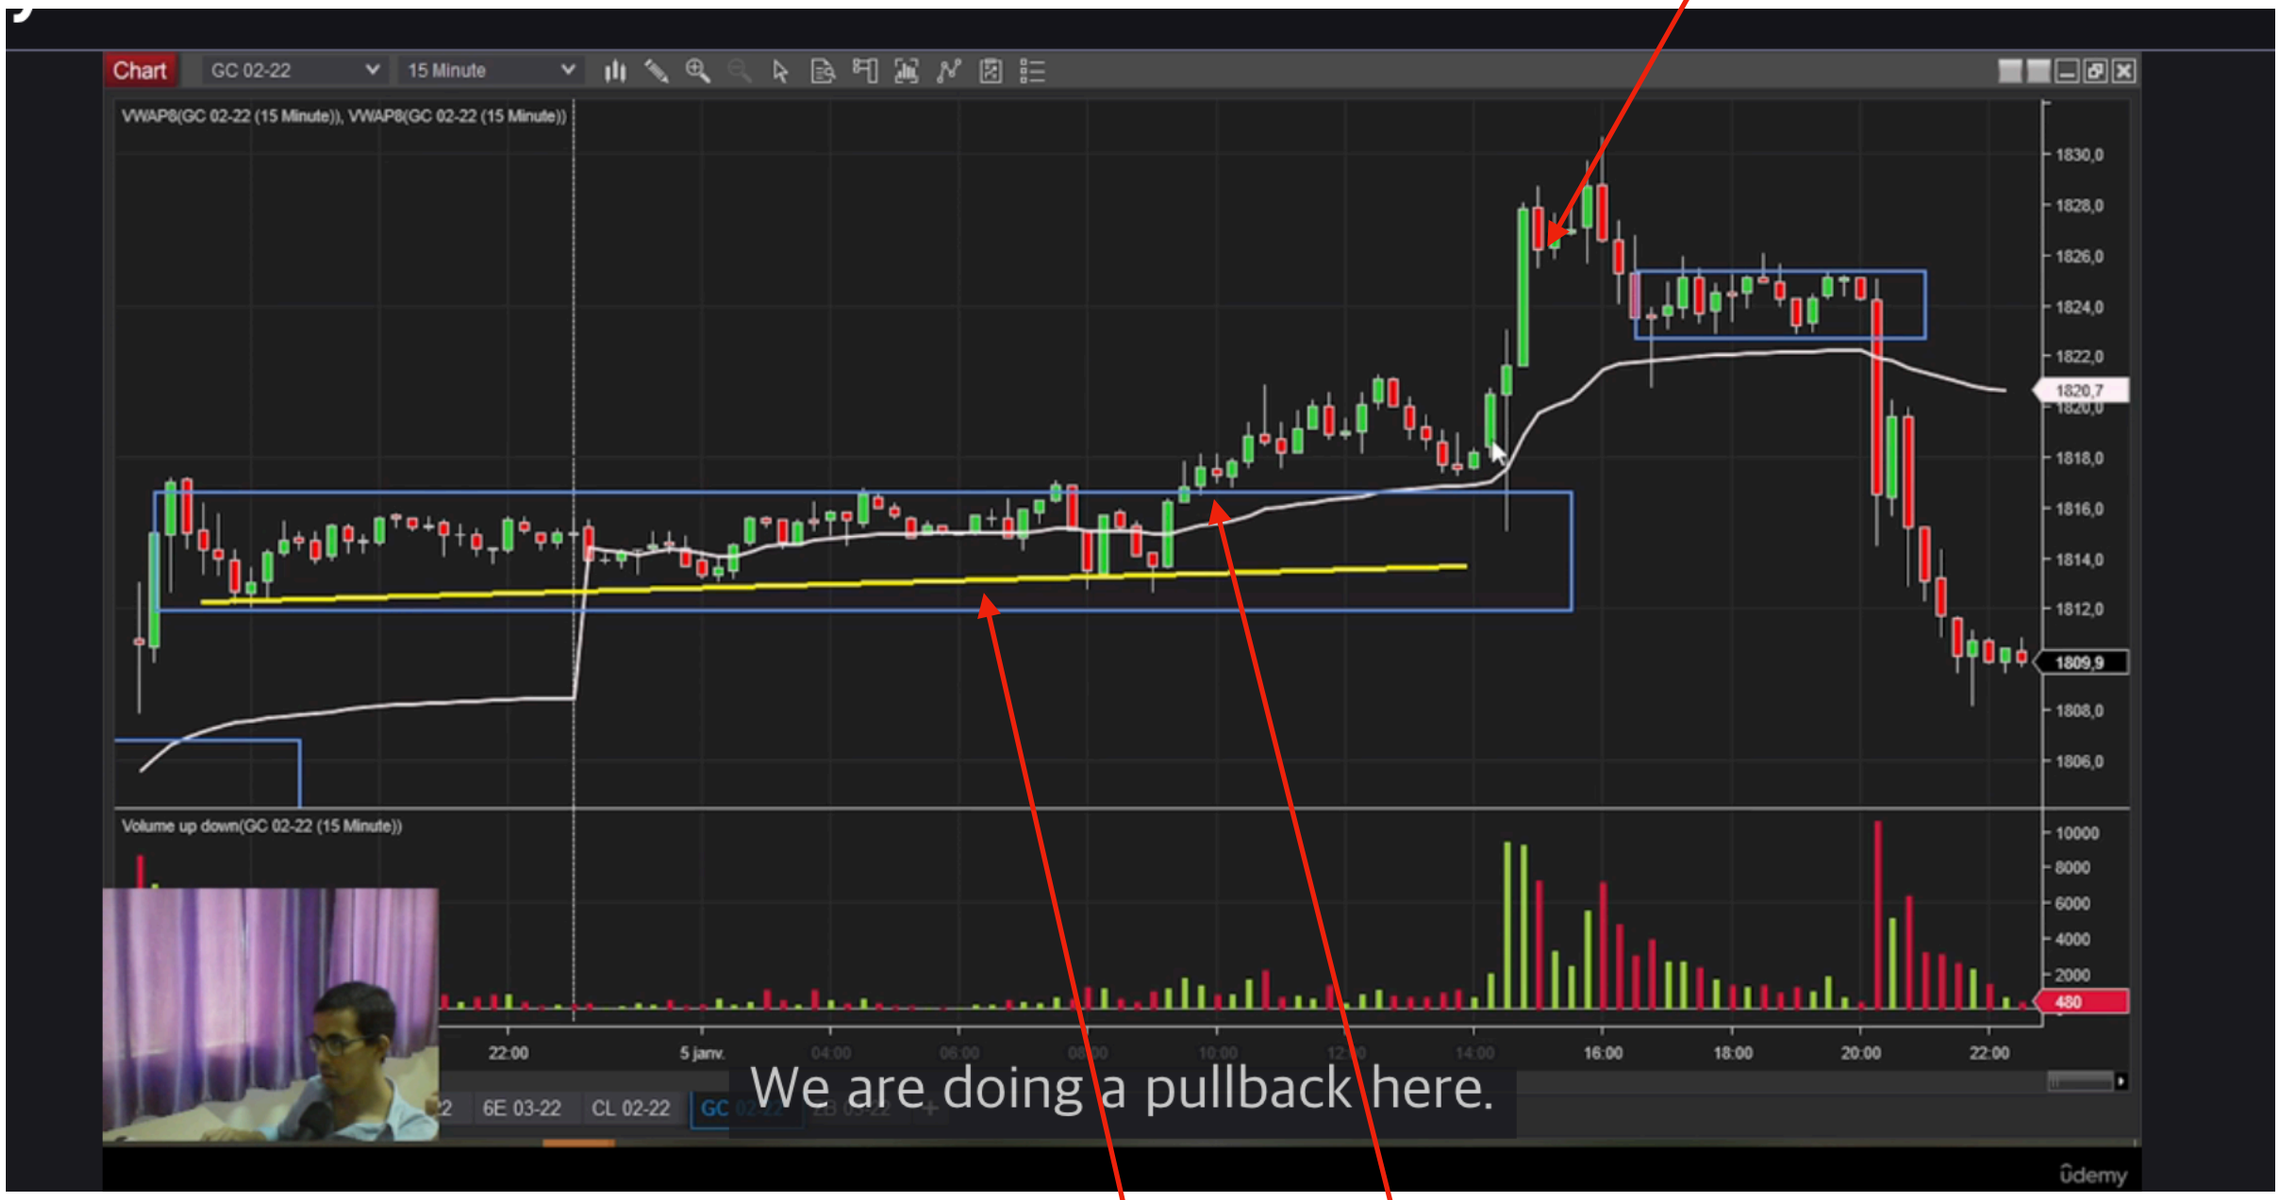
지지선(여기이상 하락시 손절)

VWAP상단에서 가격이 형성되었으나 돌파하지못하고 결국 아래로 떨어짐(short준비)

하단 박스 돌파 매도

약간 손절선을 통과했지만 candle이 형성되지는 않았으므로 기다림

Vwap에서 멀어진 상태에서 첫 음봉이 나왔으므로 익절

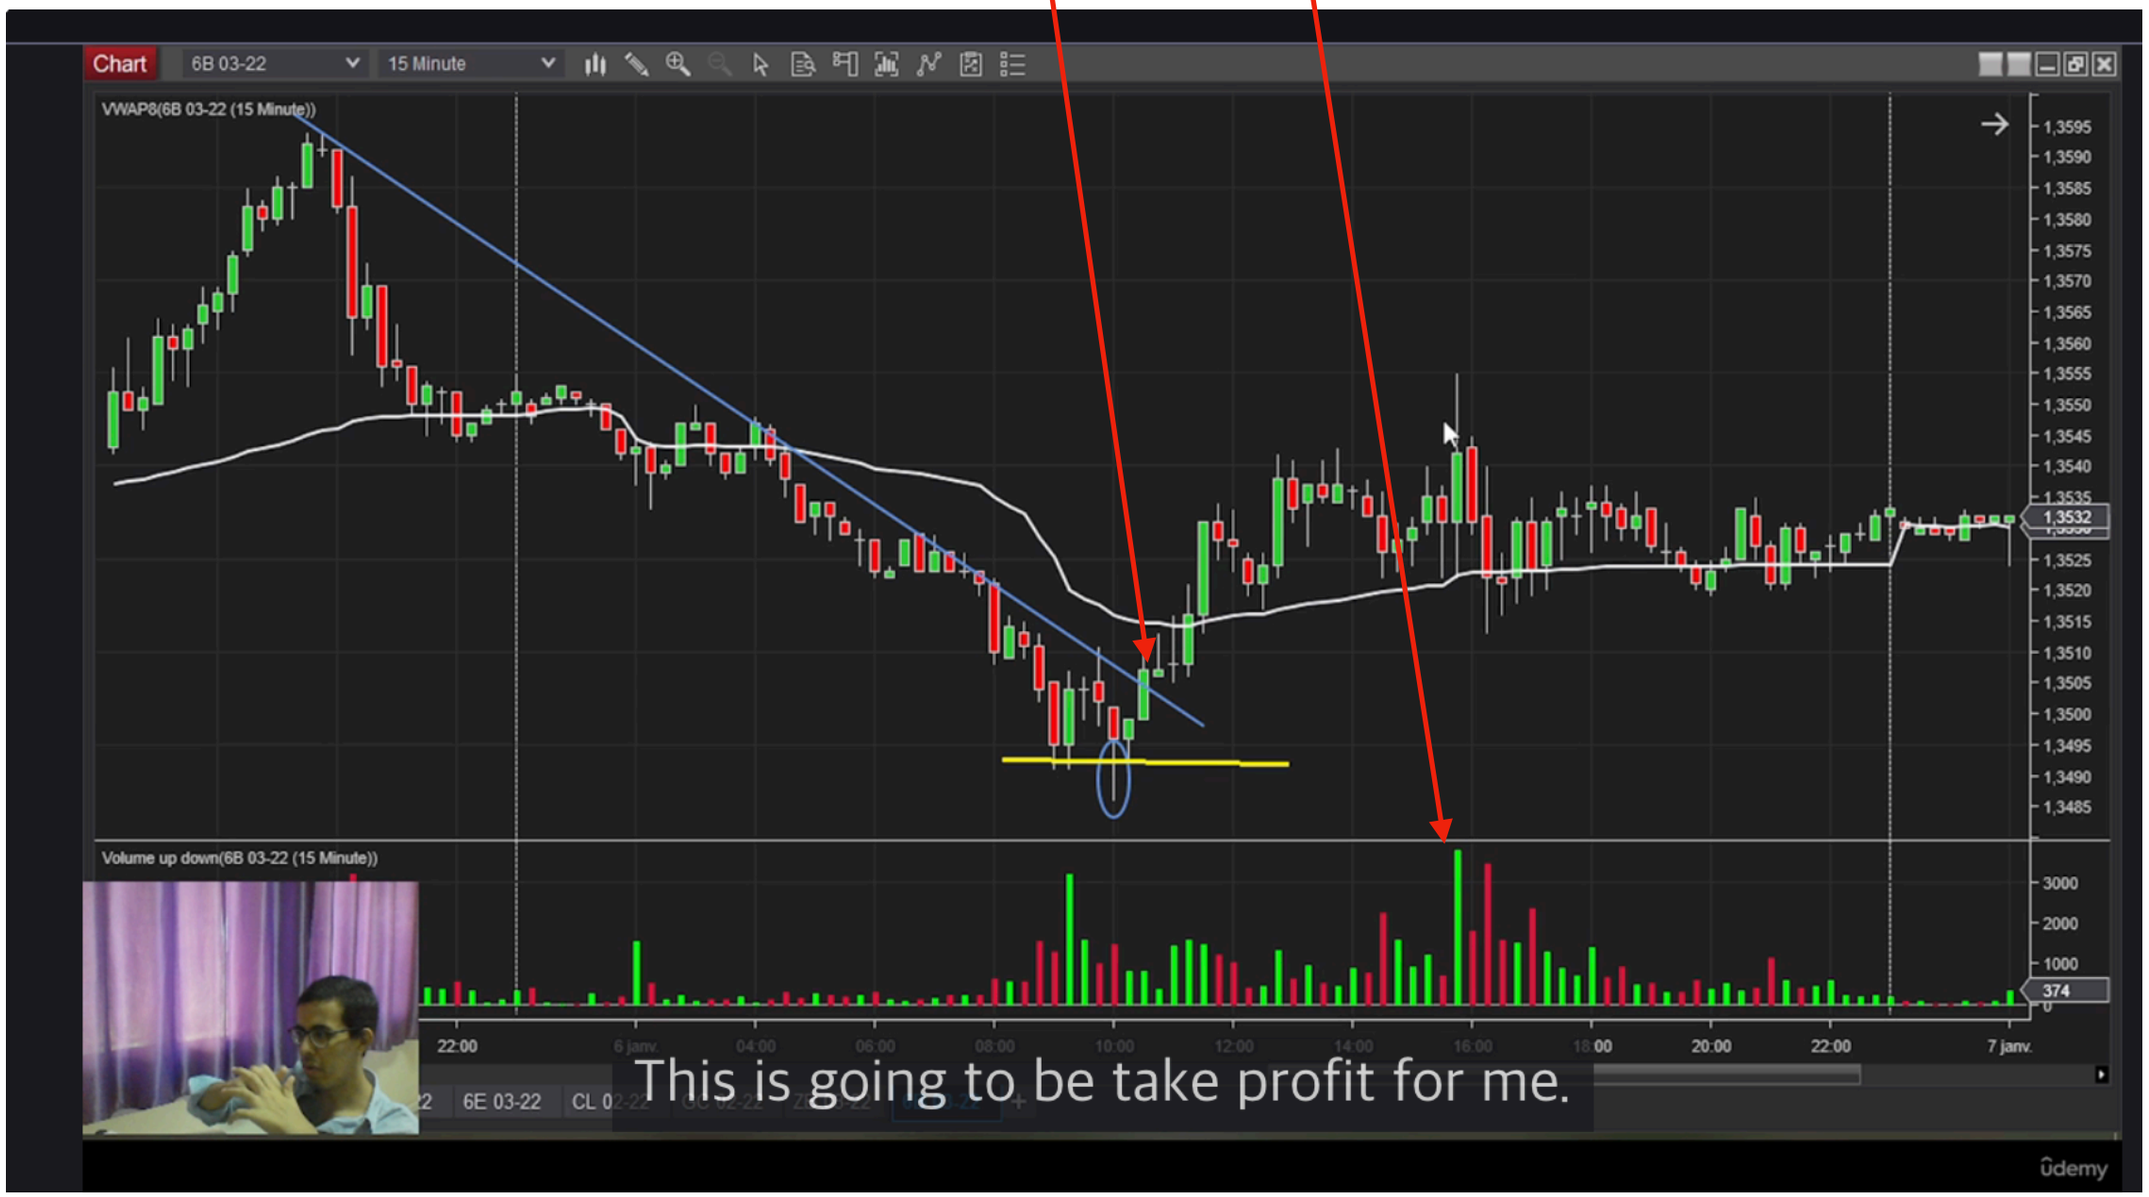


저항선통과시매수

손절선형성

돌파수 매수

Volume Spike로인한 매도



Volume Spike로인한 매도

Vwap에서 멀리 떨어져있고 방향이 바뀌었으므로 매도

손절구간

Vwap에서 멀리 떨어져있고 방향이 바뀌었으므로 매도

짧은 시간 안에 여러 번 찔렀는데, 중요한 건 찔렀다가 **멀리 밀려나지 않았다**는 점이에요. 가격이 저항선 바로 밑에 붙어서 횡보했죠
("we are really just in this resistance").
매도세가 시장을 장악했다면 가격을 아래로 끌어내렸을 텐데 그러지 못했다 → 매수세가 계속 밀어붙이고 있다 → 곧 뚫릴 가능성이 높다.
(가짜 뚤림이 있었는데 이를 구분하는 방법은 추후 강의에서 계속 설명)

진입은 VWAP에 최대한 가까이, 청산은 VWAP에서 최대한 멀리

별다른 지지선이 안생겼으므로 Stop loss를 Vwap밑에설정

저항선이 Vwap위에 있으므로 long포지션

Support and resistant

Support and resistance arent lines

Support and resistance arent the best level to put your stop loss

The more the r or s is tested the weaker its becomes, because

If the market keep testing the support, that means these orders will be eventually filled, and then who s gonna support the market to go up ?

S : area in the graph where buyer are intersted, in another word, potential buying pressure

R : area in the graph where sellers are intersted, potential selling pressure

Higher lows into a R it breaks more often than not

Lower high into a S it breaks more often than not

SR they are not lines they are area

Their is two type of trader : the fomo and the coservatives

The fomo they excute their order as soon as the market touches the S

The conservatives they put the order under the S to get the best price

We do not know which group in control, that why we gotta approach the SR as area not line, meaning the market sometimes over shot or undershot

SR are the worst area to put your sl

Why

You dont need to be a witch to know where are the sl, they are under the s and above the r. they get hunted easiy

Cant be avoided, that trading but, exit your trade only if we close below the s

That the catch, the real trend happens usually after a sl hunting. So we have to take advantage of this if we spot it.

When s is broken it tends to become a r

How to know if the sr is gonna break

We need a buildup

Watch how we are approaching the RS.

Descending triangle into support is more likely to break.

Ascending triangle into resistance is more likely to break.

Because that shows a sign of strenght

Not all setups are equal and we have to analyse how we are approaching those levels : we are approaching the sr with strong momentum, or lack of momentum

Support and resistance are not equal, Resistance tends to break into up trend. And support tends to break into down trend.

Watch how we are approaching the support and resistance.

when we are approaching a support or resistance with a straight line- strong trend that a sign of fake breakout.

So what we wanna see is approaching the support or resistance with a descending or ascending triangle or a consolidation around the S/R.

descending or ascending triangle or a consolidation around the s/R

What we dont wanna see trading S/R breakout is aproaching this key level with a ***strong trend***

If we have a trading range we need a consolidation close to s/r

Why we dont wanna trade the break out when we have a strong momentum, its because traders on profit they gonna start closing their position(lets say we are breaking out a resistance) and sellers they gonna start selling the resistance and that creates a selling pressure and therefore the market reversed.

It s here when trapped trader try to chase a big candlle and they think that the start of a trend, next thing you know the market deflated.

- You wanna trade the breakout when you have no opposite pressure in your path.
- Trade with the trend, trend is your friend until it bends.

- Make sure you have a rational idea where to put your stoploss

The meaning of a descending and an ascending triangle ?

The higher lows into th resistance shows that buyers are intersted to buy higher

The lower high into the support shows that sellers are intersted to sell lower

So to sum this up

What we wanna see is : trading with the trend, having a rational idea where to put your stop loss, and show we have a compression(storing of energy)

What we wanna avoid : chasing the market, and trade the breakout when we have a strong trend, and enter the market when we have no idea where to put the stoploss.

If you dont know what are you risking you are risking everything.

- If you dont know your rules everything you do is a mistake
- By focsuing n the risk you st your platform for good reward
- Invert thinking

피해야하는 Trading

다음과같은 Downtrend는 피해야한다 하나의 큰 candlestick이 만들어졌으므로
사람들이 공포에 매수하기 시작하고 좀있으면 해당추세가 바뀔 가능성이 커지므로

피해야하는 Trading
Build up 없이 한번에 뚫리는 저항은 피해야한다.

잡아야하는 Trading
Support Resistance를 지속적으로 Trading하다가 닿는경우

잡아야하는 Trading
지속적으로 저항선을 Touch하고있음 뚤리면 들어가는게 좋은자리

This is a lot of people that want the easy money.

잡아야하는 Trading
저항선을 뚫을때 들어가고

손절선

VWAP을 reject하므로 다음 candle에 익절하는게
좋음

I'm not gonna I'm not gonna second guess it because we have

익절
(wick이 나타났고 이는 buyer
가 나타났다는 표시)

Support 하락선을 뚫을 때 진입

지지를 뚫었을때 진입시점
아래그림처럼 Trading Range는 길면 길수록 좋다.

We have this really good support.

규칙을 정리하면:

- 횡보(박스권) 중 거래량 스파이크 → 추세의 시작. 이때 터진 거래량은 진입 근거.
- 이미 진행 중인 추세에서 거래량 스파이크 → 추세의 끝일 가능성이 높음. 이때 터진 거래량은 익절 근거.

진입

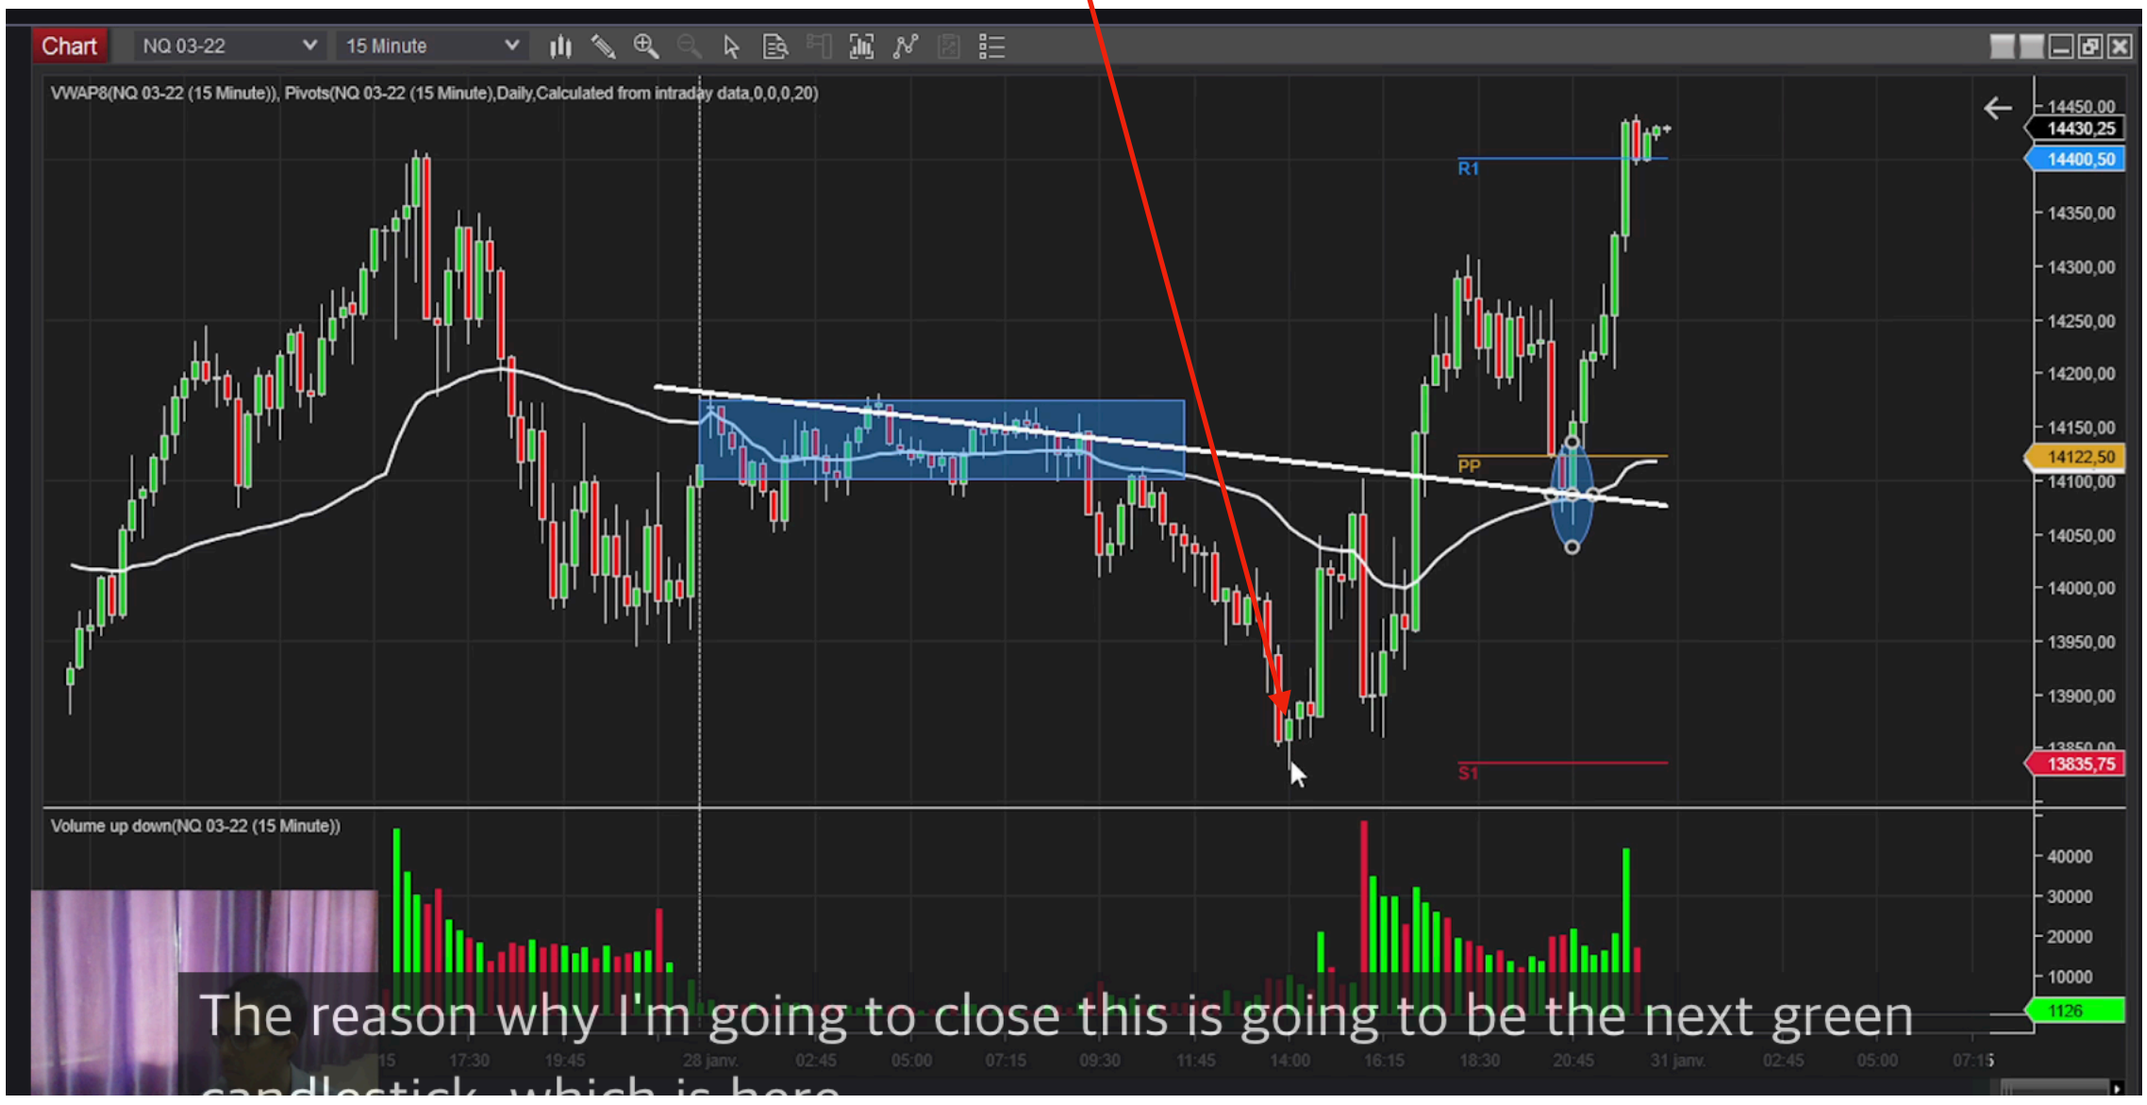
VWAP에서 멀어졌으므로 wick이 생겼으니 익절을함

to start looking for reasons to close my position, and I'm going to

손절선을 정확한 지지선이 아닌 지지선 조금 위로 설정해야하기 때문에 이케이스에서는 손절을 안함

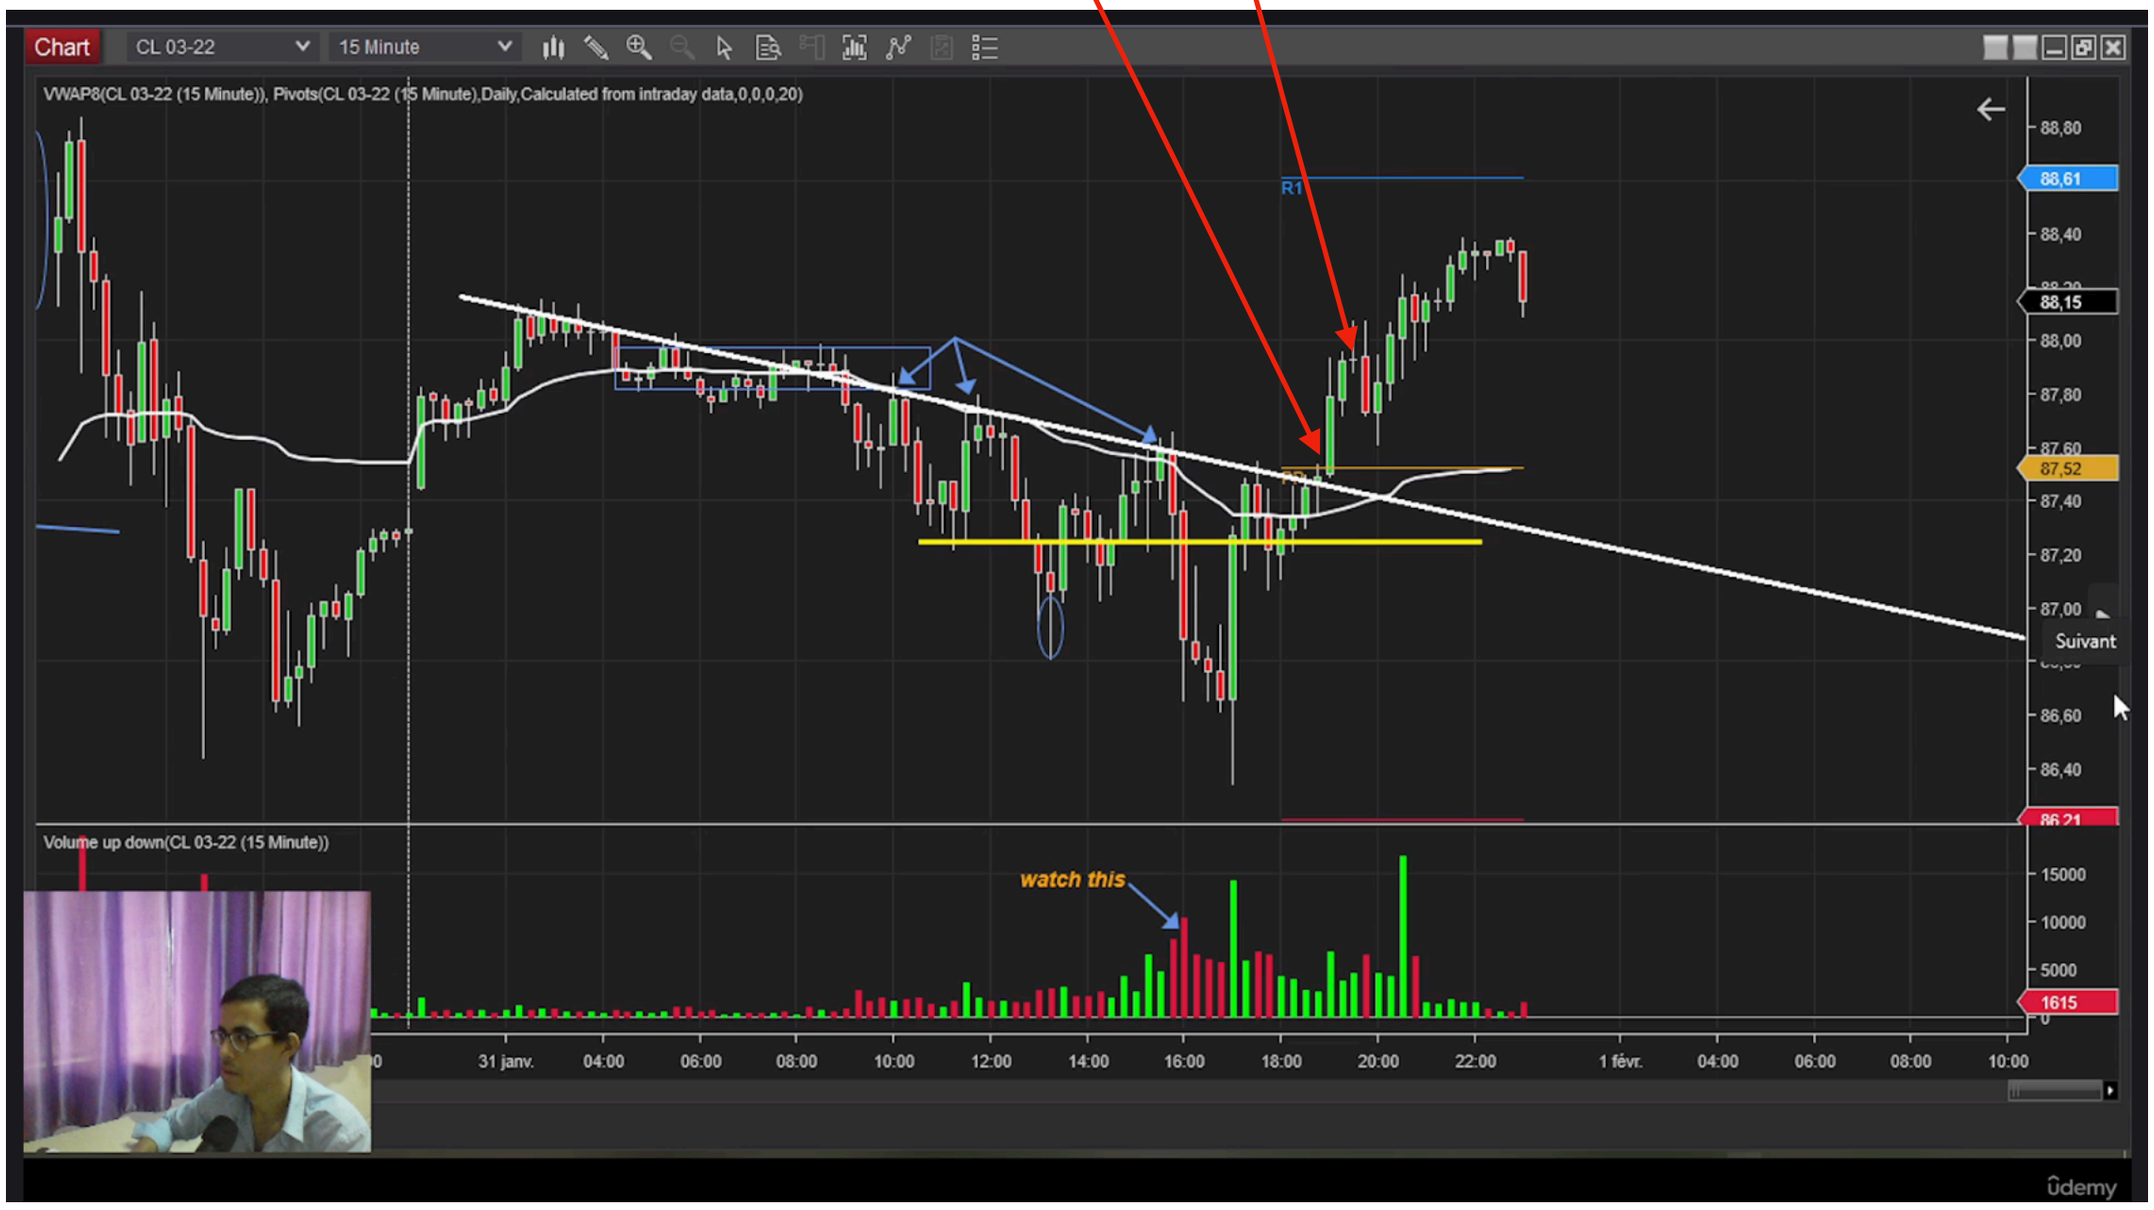
진입

VWAP을 Reject한 후 바름 다음 candle stick에서 green candle이나왔으므로 이때 익절



진입

Vwap을 reject하는 순간 익절



이미 진입후 횡보하다가 Volume Spike와 함께 Vwap을 reject했으므로
다음캔들을 기다리지 않고 바로 캔들 끝나고 익절

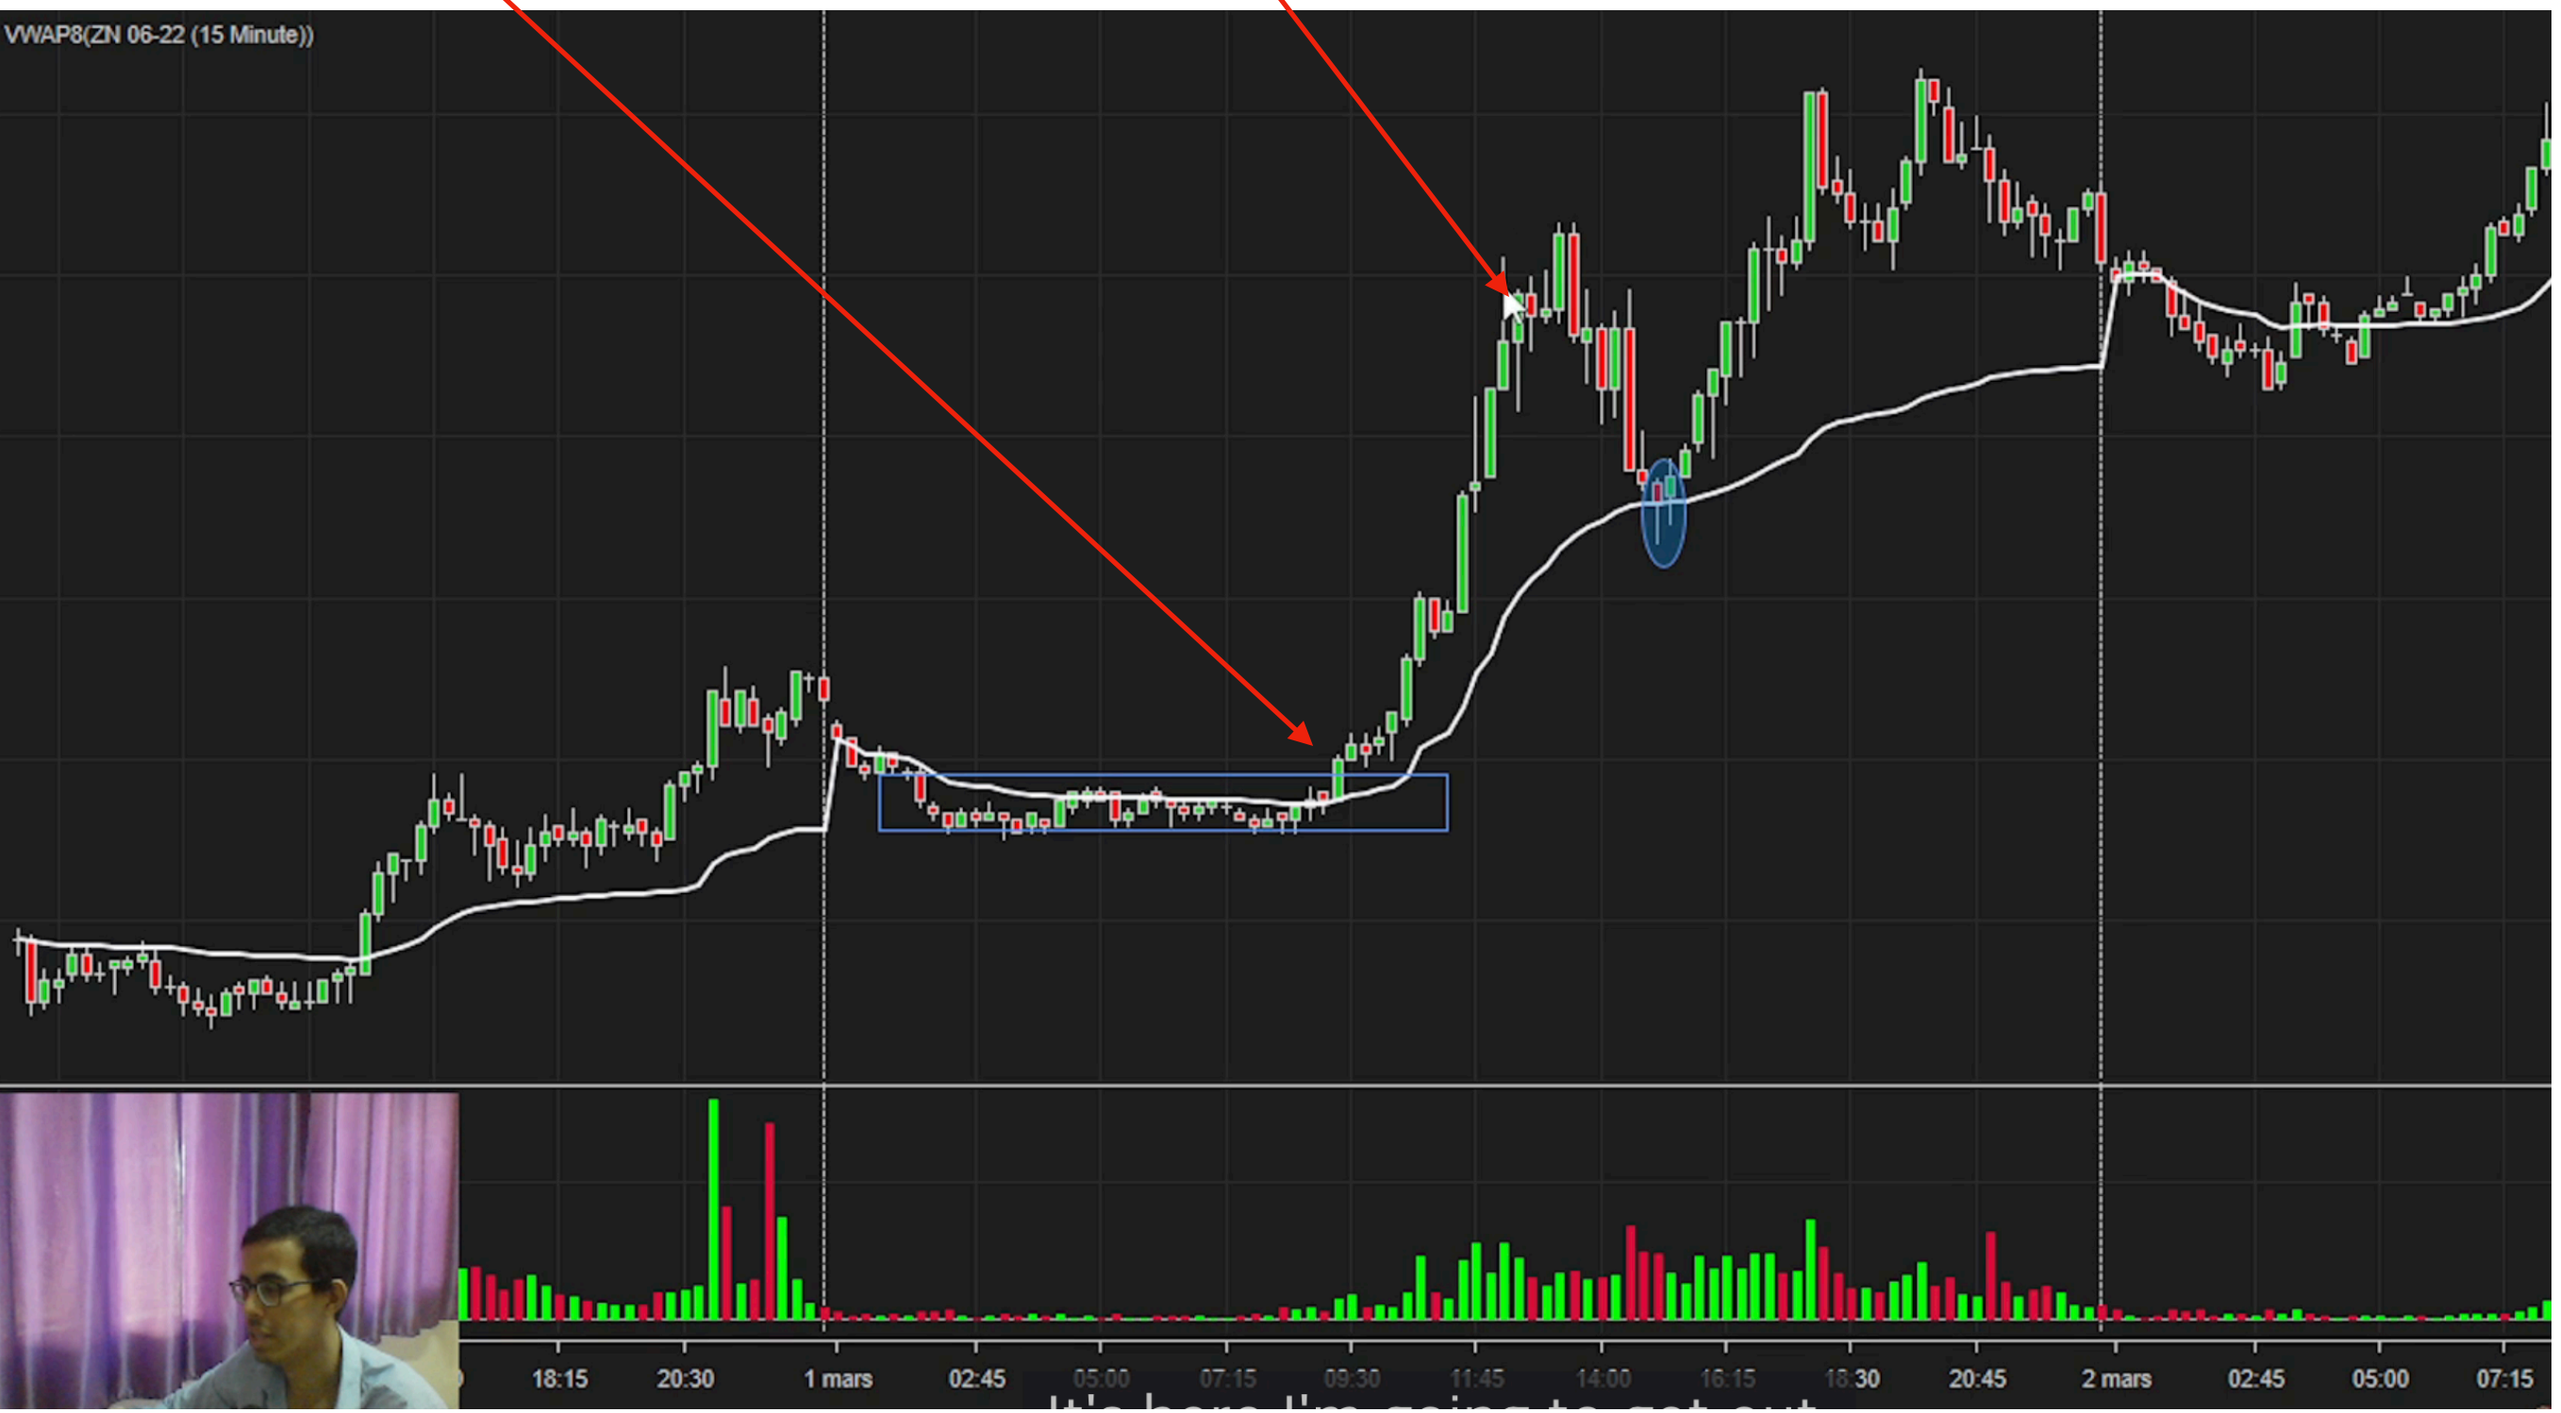
진입점아님

1. 한번에 뻥뚤음
2. Vwap에서 너무 멀어져있음

익절 포인트 아님(돌파에 따른 거래량이나오고 아직 volume spike가 일어나지 않았으므로 vwap을 reject했다고 볼 수 없다.

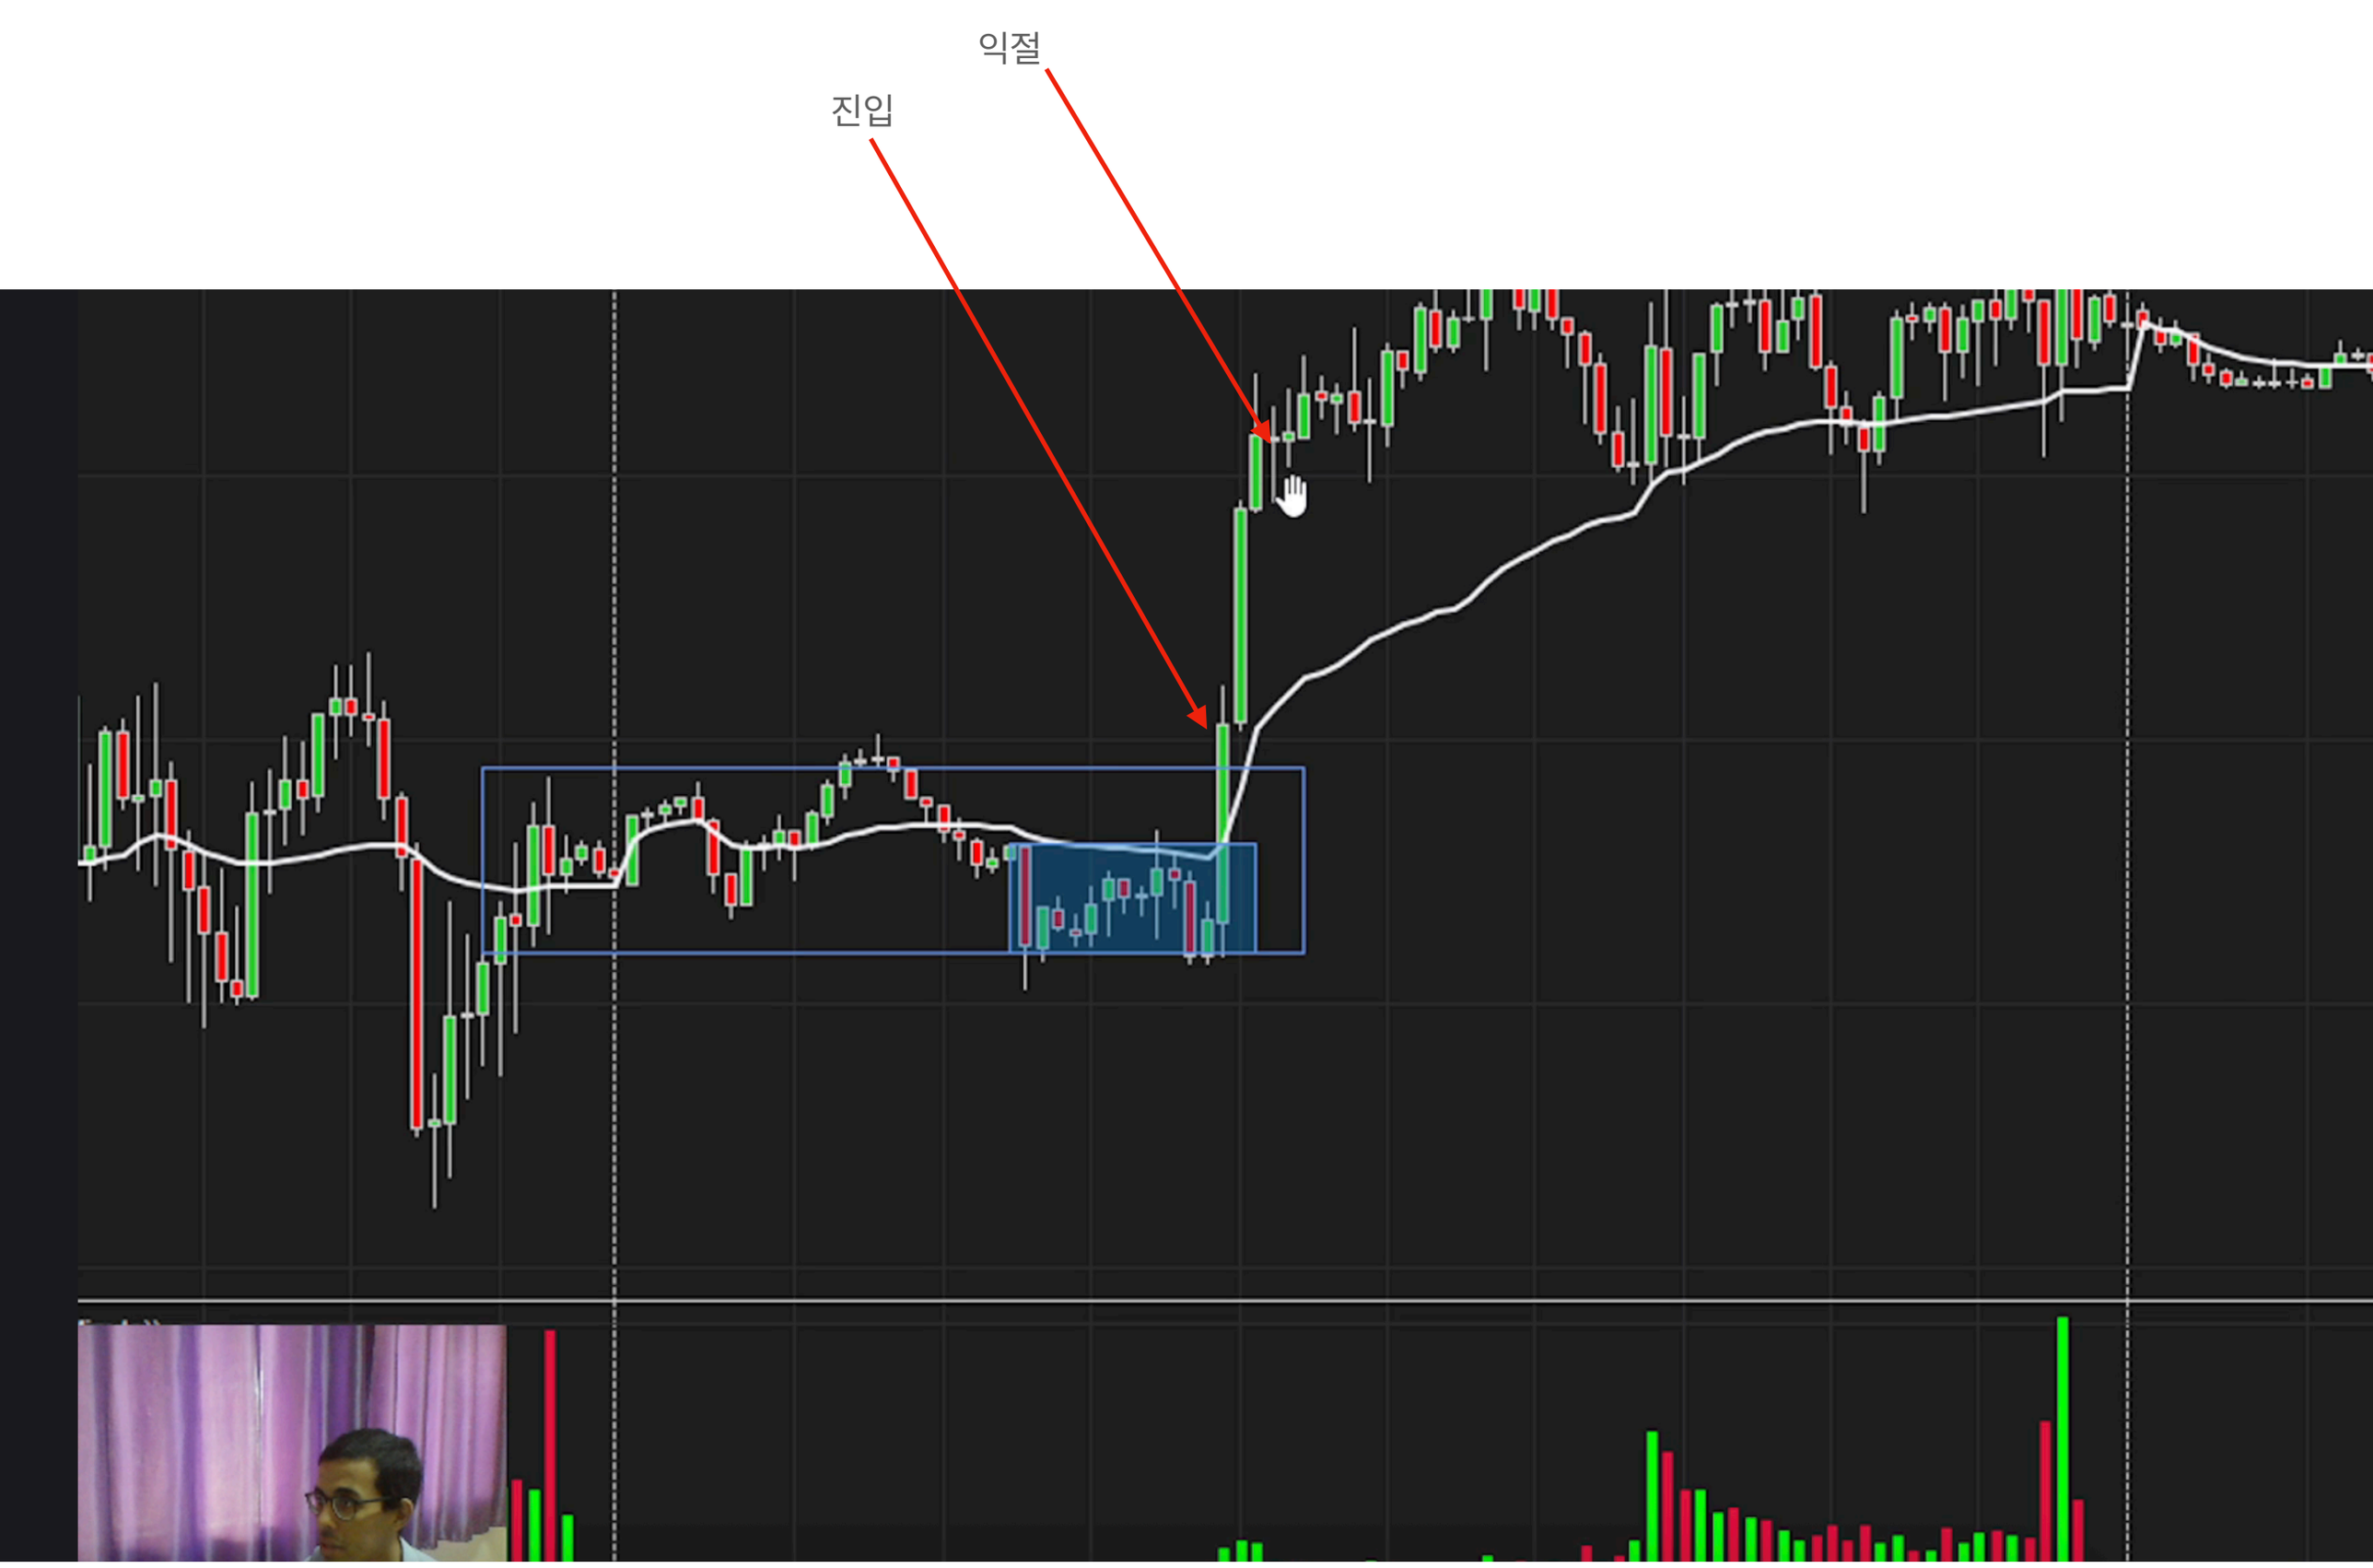
진입

Candle 위에 긴 막대(seller가 존재한다.) vwap을 reject한 포인트로보고 익절



돌파

Vwap reject한후 첫 음봉이므로 익절



익절
진입

커다란 candle이 나와서 점프했으므로 이 candlestick을 지난후 익절

And when we have this big candlestick is more often than not, this is gonna reverse.

Red Candle이 나오므로 다음곳에서 익절

Wick이 나오는곳에서 익절

spike후 바로익절
